

Listing of Claims

Please replace all prior versions of claims with the following listing of claims:

- 1-20. **(Cancelled)**
21. **(New)** A method of formatting content for display on a mobile wireless client device that is based on a form that is used to display content on a desktop computer, the form being associated with an action that is executable by an application, wherein the form is stored remotely from the mobile wireless client device, the method comprising:
- enabling selection of the action on the mobile wireless client device;
 - receiving, via a wireless medium, the selection of the action from the mobile wireless client device;
 - executing the action from the mobile wireless client device, wherein executing the action generates content;
 - providing a mobile design element that corresponds to the form and is associated with the mobile wireless client device;
 - formatting the content according to the mobile design element,
 - transmitting the content that is formatted according to the mobile design element to the mobile wireless client device, and
 - storing the mobile design element remotely from the mobile wireless client device in a application digest.
22. **(New)** The method of claim 21, wherein the mobile design element comprises at least one of a document style sheet, a view style sheet, a pre-formatted page, and a script.
23. **(New)** The method of claim 21, further comprising customizing the form according to settings selected on the wireless client device.

24. **(New)** The method of claim 21, further comprising customizing the form based on at least one of a date/time setting, a language setting, a field size setting, a content size setting, and a mobile design element size setting.

25. **(New)** The method of claim 21, further comprising:
generating the mobile design element based on the form.

26. **(New)** A system for formatting content for display on a mobile wireless client device that is based on a form that is used to display content on a desktop computer, the form being associated with an action that is executable by an application, wherein the form is stored remotely from the mobile wireless client device, the system comprising:

a processor that, in response to a reception of a selection of the action on the mobile wireless client device via a wireless medium, generates content by executing the action remotely from the mobile wireless client device,

wherein the content is formatted according to a mobile design element that corresponds to the form and is associated with the mobile wireless client device and the content formatted according to the mobile design element is transmitted to the wireless client device via a wireless medium; and

an application digest that stores the mobile design element remotely from the mobile wireless client device.

27. **(New)** The system of claim 26, wherein the mobile design element comprises at least one of a document style sheet, a view style sheet, a pre-formatted page, and a script.

28. **(New)** The system of claim 26, wherein the form is customized according to settings selected on the wireless client device.

29. **(New)** The system of claim 26, wherein the form is customized based on at least one of a date/time setting, a language setting, a field size setting, a content size setting, and a mobile design element size setting.

30. **(New)** The system of claim 26, further comprising a compiler that accesses the form and generates the mobile design element based on the form.

31. **(New)** A system for formatting content for display on a mobile wireless client device that is based on a form that is used to display content on a desktop computer, the form being associated with an action that is executable by an application, wherein the form is stored remotely from the mobile wireless client device, the system comprising:

processor means for, in response to a reception of a selection of the action on the mobile wireless client device via a wireless medium, generating content by executing the action remotely from the mobile wireless client device,

wherein the content is formatted according to a mobile design element that corresponds to the form and is associated with the mobile wireless client device and the content formatted according to the mobile design element is transmitted to the wireless client device via a wireless medium; and

element storage means for storing the mobile design element remotely from the wireless client device.

32. **(New)** The system of claim 31, wherein the mobile design element comprises at least one of a document style sheet, a view style sheet, a pre-formatted page, and a script.

33. **(New)** The system of claim 31, wherein the form is customized according to settings selected on the mobile wireless client device.

34. **(New)** The system of claim 31, wherein the form is customized based on at least one of a date/time setting, a language setting, a field size setting, a content size setting, and a mobile design element size setting.

35. **(New)** The system of claim 31, further comprising compiling means for accessing the form and generating the mobile design element based on the form.

36. **(New)** A storage medium for storing machine readable code, the machine readable code being executable to format content for display on a mobile wireless client device that is based on a form that is used to display content on a desktop computer, the form being associated with an action that is executable by an application, wherein the form is stored remotely from the mobile wireless client device, the storage medium comprising:

receiving code that receives, via a wireless medium, the selection of the action from the mobile wireless client device;

executing code that executes the action remotely from the mobile wireless client device, wherein executing the action generates content;

providing code that provides the mobile design element that corresponds to the form and is associated with the mobile wireless client device;

formatting code that formats the content according to the mobile design element;

transmitting code that transmits the content that is formatted according to the mobile design element to the mobile wireless client device; and

storing code that stores the mobile design element remotely from the mobile wireless client device in a application digest.

37. **(New)** The storage medium of claim 36, wherein the mobile design element comprises at least one of a document style sheet, a view style sheet, a pre-formatted page, and a script.

38. **(New)** The storage medium of claim 36, further comprising customizing code that customizes the form according to settings selected on the wireless client device.

39. **(New)** The storage medium of claim 36, further comprising customizing code that customizes the form based on at least one of a date/time setting, a language setting, a field size setting, a content size setting, and a mobile design element size setting.

40. **(New)** The storage medium of claim 36, further comprising:
generating code that generates the mobile design element based on the form.
